

The Problem:

Alloy and steel rims are exposed to direct weather and mechanical impacts. Hot brake dust that burns in on the lacquer surface, rain, dirt, stone chipping or improper cleaning with aggressive cleaners can reduce the value and impair the finish of valuable alloy and/or steel rims.

The Solution:

P21S[®]

Wheel Cleaner Light Alloy

Product Advantages:

Automatically removes any contamination, like e.g. street dust, brake dust, etc.

- Guaranteed acid-free, not harmful to surfaces
- Cleans automatically: Spray on, let react shortly, rinse away and you're done!

**Liquid
Power
Formula**

Applications:

Alloy and steel rims on vehicles and motorbikes

How to apply:

Spray on the cold rims, let react for 5-10 minutes and finally rinse away with a strong water jet or drive through a car wash. Do not use in extreme direct sunlight!

Note: Please use the rim cleaner on painted and anodised alloy rims only. Do not use the product on mirror-finish rims (e.g. like on most motorbikes)! Check P21-S for material compatibility in case of doubt.
