

**The problem:**

**Blinding, oily films on the car windscreen**

Grime such as insect carcasses, dust, silicon, wax, diesel exhaust particles etc. on the windscreen lead to dangerous blinding, oily films, especially during rain and darkening hours. Using the car's windscreen washer system only removes the very outer surface dirt. A water-repellent, hydrophobic, milky layer stays behind, which scatters incident light, especially that of vehicles coming the other way, thus blinding the driver.

**The solution:**

**Window  
Cleaner**

**CW 1:100 - more than 20 years of success**

**Product advantages:**

**Very economical: one 250 ml bottle dilutes to 50 litres**

- Rapidly removes the dangerous blinding, oily film from the windscreen, and is the best product for the quality-conscious, economical driver.
- The only product that can be diluted to a ratio of 1:200
- Protects the material and is suitable for use on plastic headlight lenses and fan nozzles
- Increases the life of windscreen wipers
- Reduces packaging (20 bottles less than a normal concentration).

**Applications:**

**Windscreen washer system, headlight washer system**

**How to apply:**

**250 ml bottle**

Twist open the cap a small way. Gently squeezing the bottom of the bottle, fill the dosing cap up to 25 ml with concentrate. Screw the cap off completely and add the contents of the dosing cap to the windscreen washer water.

**For use in winter:**

Dilute CW 1:100 Classic at a ratio of 1 to 50. The content of two 25 ml dosing cap dilutes to 2,5 litres. CW 1:100 Classic can be mixed with commercial antifreeze in the following order. 1. Antifreeze, 2. Water, 3. CW 1:100 Classic.

Warning: The ratio of antifreeze must not exceed 50 %.
