

The problem:

Especially in summer, windscreens often collect a lot of insects. These impact onto the windscreen with a very high speed and are very hard to remove.

The solution:

Insect Remover

WITH SUPER-GEL FORMULA

Product advantages:

Removes even stubborn grime from windscreen, headlights, bonnet and radiator grille.

**Winning Price-
Performance Ratio!**
issue No. 26/02

- Rapid removal of insect carcasses, even those stuck hard due to high impact speed (especially on highways)
- Extremely economical application, since the super-gel formula prevents the product from running, thus allowing it to soak and work longer.
- Guaranteed compatible with paint, plastics etc.

Applications:

Windscreen, headlights and front area of the car

How to apply:

Before going through the carwash, or before manually washing, spray CW 1:100 Insect Remover onto the stained surfaces and let it soak in for a short while. If necessary, use a sponge to help get off the most stubborn grime. Afterwards, rinse down thoroughly with water. Ideal as pre-wash before the carwash or cleaning while en route, say at a service station. Also for cleaning the front area of the car (e.g. bonnet, radiator grille, bumper and headlights). Guaranteed compatible with all paints! Note: Do not use under a hot sun or apply to hot surfaces.
