

The Problem:

Rust and corrosion caused by moisture attack the metal parts of a motorbike and deteriorate its value and appearance. Only a few people know that a reliable and effective protection against this problem exists.

The Solution:

S¹⁰⁰ CORROSION PROTECTANT

Product Advantages:

Improved creep performance, for effectiveness even on hardly accessible areas

- Regular application protects all motorbike metal parts reliably against new corrosion and stops existing corrosion
- Forms a "self-healing" transparent protection film that closes again immediately after contact and therefore is superior to wax
- Perfectly suited for winter abandonment
- Not aggressive to lacquer, rubber and plastic materials
- Greases and eliminates moisture
- Successfully passed a salt spray test according to DIN 50021 after 2,112 hours

Applications:

All metal parts

How to apply:

Shake the can before use. Apply the product on clean and dry surfaces only. Spray on the product sparsely and evenly or apply with soaked cloth and wipe with a soft cloth subsequently. Apply generously for winter abandonment (without rewiping).

Note: Do not spray on hot surfaces! Do not spray on brake disks and tyre treads!

Tip:

The product can be fully removed with the S100 Motorcycle Total Cleaner.
