

The Problem:

Insects downright bang on the motorbike during rides. These insects can cause severe damages in unprotected surfaces – quite often in the form of etchings on lacquer and plastic parts.

The Solution:

Insect- Protector

NEW!

Product Advantages:

Protection against insects

- Prevents insects and dirt from sticking to the surface
- Facilitates cleaning
- Reduces the risk of etchings from insects

Applications:

Complete motorbike front, headlamps, touring windshields. All lacquer, plastic and metal parts. Do not use on helmet visors (glare risk)!

How to apply:

Shake the can well before use. The mixing ball must be clearly audible during shaking. Spray the product sparsely and evenly on the dry and clean motorbike. Distribute evenly on the surface, using a cloth, if required. For inaccessible areas, spray the product generously on a cloth and apply. Do not let the product dry on the motorbike. Wait for about 3 minutes and wipe away with a clean, soft and lint-free cotton or microfibre cloth. For maximum effectivity, protect the treated surfaces from moisture for one hour.

Tip:

For an optimal pre-treatment, clean the motorbike with S100 Motorbike Total Cleaner.
