

The Problem:

Everyone exposed to unforeseen rainfall knows the importance of wearing impregnated textile fabric or function leather clothing (whether jacket, trousers or shoes). Even the outer lining of waterproof membrane clothing soaks with water, producing unpleasant evaporation cold through airflow. The body cools down and you get the feeling of being wet. The membranes' breathability is also reduced.

The Solution:

WATERPROOFING AGENT

EXTRA STRONG

For Textiles and Leather

Product Advantages:

Permanent protection against wetness and evaporation cold

Advancement of the multiple test winner e.g.

Issue 1/2006
"Best product in comparison"

- Preserves the breathability of climate membranes
- Extremely long-lasting effect
- Protects against bleaching from UV radiation
- Protects against soaking and therefore against evaporation cold
- Oil- and water-repellent effect
- Stain-free

Applications:

Textiles and leather, with and without climate membranes, like e.g.

- Jacket
- Trousers
- Boots
- Backpack

- Tank backpack
- Gloves
- Tent
- Leisure and rain clothing

How to apply:

We recommend you to wash the textiles or clothing with S100 Technical Fabric & Leather Wash prior to impregnating in order to perfectly prepare the textile fibre for absorbing the impregnating agent. Shake the can before use. Spray the product on the dry and clean surface in well ventilated area – preferably an outdoor space – from a distance of around 20cm. Let dry shortly at a sun-protected place.

Tip:

The water-repellent effect can be extended through a heat treatment after complete drying, e.g. by hanging up the textiles in a sunny place. Please observe the manufacturer's care instructions.
