

The Problem:

Motorbike chains are subject to extreme stress. Environmental impacts, like street dust and dirt contaminate the chain grease, impairing a proper greasing of the chain. This lack of grease leads to increased wear and tear effects.

The Solution:

S¹⁰⁰ CHAIN CLEANER

Product Advantages:

The indispensable basic cleaning of the motorbike chain

acid-free

- The new formula combines an optimal creep performance during spraying with perfect adhesion during reaction ("thixotropy")
- Automatic cleaning through gel formulation
- Increases the wear protection of the chain kit
- High creep performance for perfect cleaning
- O/X/Z ring tested and compatible
- Improved smooth-running features
- Special corrosion protection additives
- Acid-free, non-hazardous to surfaces

Applications:

For all highly stressed, fast-running drive chains

How to apply:

Shake the can before use. Spray S100 Chain Cleaner on the chain and let react for 15 minutes. In case of persistent soil, treat the chain links with a brush (do not use a wire brush). Finally, spray-in the chain again and rinse thoroughly with a strong water jet. Let the chain dry before continuing the treatment. Grease the dry chain with S100 White Chain Spray before the next ride.

Note: S100 Chain Cleaner must not contact brake disks and tyre treads (accident risk!). Wipe off any product from inadvertently sprayed-on motorbike parts.
