

The Problem:

High-quality metal parts treated with various lacquers as well as painted or coloured plastic materials and plexiglass screens for cover parts are increasingly used for motorbikes. In contrast to passenger cars, these parts are exposed to high stress every day. Insufficient or improper care can cause these surfaces to quickly lose their gloss and appealing finish.

The Solution:

Paint & Plastic Polish

HEPCO & BECKER
recommends S100

Product Advantages:

Deep gloss on all smooth surfaces

- Removes fine scratches and matt spots
- Refreshes the colour
- Easy to use
- Efficient and easy application
- Solvent-free
- Water-repellent

Applications:

Surfaces on motorbikes and scooters

- Painted metal parts (plain-colour, multicolour and metallic lacquers)
- Coloured smooth plastic parts
- Painted smooth plastic parts
- Plexiglass screens
- Helmet visors
- Weathered and new lacquers
- Painted rims
- Decals (does not loosen decals)
- Airbrush paintings

How to apply:

Shake well before use. Depending on the soil level, clean the motorbike with S100 Motorcycle Total Cleaner, if required. Polish-in the polishing product sparsely with a cloth or polishing wad. Let dry shortly and finally polish away with a terry cloth.

Note: Store in a frost-protected place.
