

**The problem:**

**Dirty and faded convertible roof**

Most convertible hoods are made out of 3 layers. A type of cotton for the inside, a rubber - layer in between and a layer for the outside, such as PVC, Acryl, Polyacryl or, most often, a cotton - mixture. Dirt can stick easily on the outside layer because the surface is not even and because it is soft. As such it is difficult to be removed. On the other hand a convertible hood needs to be treated with special care while cleaning, because most softtops have a sensitive surface. Their structure and colour can be destroyed by rubbing. Resultingly the cleaning of convertible - hoods needs to be done thoroughly and gentle at the same time.

**The solution:**

**Convertible  
Hood Cleaner**

**Product advantages:**

- The A1 Power-Foam-Experience!
- The foam that cleans intensively and gentle at the same time

Test in issue  
No. 18/03

The Power - Foam:

- Works in a very intensive and gentle way at the same time
- Absorbs the dirt
- Works as long as needed, since it does not run off the sides
- Is very economical, since it can be applied on individual points
- Revives the colour through cleaning
- Is compatible with all types of convertible - hoods
- Prooves an extremely high yield: 8 - 12 applications on the complete hood, whereas other products make only 2 - 6 applications possible
- Offers an extremely easy application

**Applications:**

**For all convertible hoods!  
(PVC, Acryl, Polyacryl, cotton - mixtures)**

**How to apply:**

Wet the hood with water and clear away loose dirt. Shake the spray-can before use. Apply the A1 Convertible Hood Cleaner where needed. Let the foam interact for 5 minutes in case of persistent dirt Clean the hood with a soft, wet sponge. Wash the sponge inbetween Then wash the hood with plenty of water. If necessary, repeat the whole procedure.
