

Background:

A1 Ultra, the new generation of automobile paint care. A new development from the Dr. Wack research laboratory. It combines premium quality with revolutionary quick action and easy application. Together, A1 Ultra Clean & Polish and A1 Ultra Minute Wax make a complete paint care system (wash - polish - protect) that takes less than half the time that ordinary product combinations take to apply. Of course, these two products can also be used separately.

The solution:

**Clean
& Polish**

Product advantages:

Wet wash & polish in one step

- Without polishing out! - Also removes resin, tar and insects

- One step instead of four - sensationally easy
- Intensive wash:
 - Cleans the paint down to the deepest scratches
 - Even removes resin, tar and insects
 - Removes all wax and preservative layers
- Reduces carwash scratches
- Refreshes the colours
- Efficient: 250 ml is sufficient for 5 to 7 applications
- Solvent-free
- Sponge included

Applications:

**- For all types and conditions of paint
- Also suitable for glass and plastic surfaces**

How to apply:

Rinse the vehicle down thoroughly with clear water. Shake the bottle well before use, moisten the sponge evenly with product and work the product into the wet surface using a circular motion. Always keep the sponge sufficiently wet and filled with product, and rinse out occasionally if it gets too dirty. We recommend finishing parts of the car, such as mudguard or hood first, and rinsing them down before moving on to the next part, so as to prevent the product from drying onto the surface. After that, rinse off thoroughly with a thin water jet until there is no noticeable foaming. Then chamois the car down thoroughly. To protect against environmental and weathering influences, we recommend A1 Ultra Minute Wax for about 4 months protection in just a few minutes, or A1 Speed Wax PLUS 3 for about 6 months protection.
