

The Problem:

Lacquers become matt and weathered over time, often leading to cumbersome polishing work with poor results.

Lacquer surfaces are exposed to various weather and environmental impacts that damage the latter in the long run. UV radiation alone causes the lacquer to become matt and lose its gloss. But also the wind and dust or cleaning the car in a car wash leads to matt lacquer surfaces and visible scratches. Conventional products are often incapable of removing the haze; they often even deteriorate the deep gloss while at the same time requiring a high polishing effort!

The Solution:

Speed Polish

Product Advantages:

**Brilliant deep gloss – like new lacquer
Removes the haze with even less effort**

A1 Speed Polish provides a high gloss new car finish, requiring only minimum effort (like dusting). The premium lacquer polish for:

- All lacquer types (metallic and colour lacquers) as well as lacquer conditions (from new to highly weathered)
- The further enhanced A1 Speed Polish enhances an even stronger deep gloss, eliminating the need to colour polishes
- This product finally removes the haze (lacquer surface greying from environmental and weather impacts) and the typical car wash scratches
- The product can be polished away easily. It protects and seals the lacquer (up to 3 months) with high-quality Carnauba wax
- The product replaces any lacquer cleaner and is solvent-free

Applications:

For all lacquer types and conditions

How to apply:

Wash the car with A1 Speed Shampoo. Rub the surfaces thoroughly with a leather cloth. Shake the bottle before use. Let the included sponge soak in water and squeeze thoroughly. Apply A1 Speed Polish on the sponge and rub-polish the lacquer evenly with circular movements. Always keep the sponge soaked with A1 Speed Polish while polishing. Redose if required. Do not use wads. To achieve a consistent polishing result, it is recommended to polish complete car body parts in one step. Rinse the sponge during and after use. Let the A1 Speed Polish dry-in shortly after polishing and high-gloss polish with a terry cloth (no wad). Turn the cloth over several times.
