

**The problem:**

**Unprotected and old paint**

The different weathering and environmental influences the paint surface is exposed to attack the protective film of the paint in the long term. If the paint is no longer protected by a hard wax layer, then insect remains, pollen or bird droppings can attack the paint surface and cause long-term damage to the paint. Typical hard waxes are very often very difficult to work with and so lead to clouding and streaks.

**The solution:**

**Speed Wax**

**Product advantages:**

**Original deep shine and lasting protection - without streaks or clouding.**

- Given the new technology, A1 Speed Wax can be applied quickly and with ease.
- Intensifies the shine after a polish.
  - Can be effortlessly worked with, without leaving streaks or clouding.
  - Lastingly protects the paint against weathering and environmental influences. Lasts for 3 months or more, depending on weathering.
  - Ideal for application on all paints (metallic and normal paints).

**Applications:**

**For restored (and already refurbished) metallic and normal paints.**

**How to apply:**

Wash the vehicle with A1 Speed Shampoo and chamois down. Apply A1 Speed Wax thinly to the dry paint using polishing wadding or a cloth, allow to dry and polish off with a terrycloth towel or cotton cloth until you get a high gloss.
