

The Problem:

The lacquer surface is exposed to various weather and environmental impacts that attack the protective film of the lacquer surface. As soon as the lacquer is no longer protected by a hard wax layer, insect residuals, flower pollen and bird excrements can attack the lacquer surface and damage the lacquer in the long run. Conventional lacquers are often hard to use and lead to clouding and streaking.

The Solution:

Speed Wax

Product Advantages:

Original deep gloss and permanent protection – without clouding and streaking

The new technology lets you use the A1 Speed Wax quickly and easily and:

- Enhances the gloss after polishing
- Can be used easily without streaking and clouding
- Protects the lacquer from weather and environmental impacts
- Remains effective for at least three months, depending on the weather conditions
- Can be used perfectly on all lacquers (metallic and standard lacquer)

Applications:

New (and already polished-up) metallic and standard lacquers

How to apply:

Wash the car with A1 Speed Shampoo and rub with a leather cloth subsequently. Depending on the lacquer condition, polish with A1 Speed Polish or A1 Ultima Show & Shine Polish before treatment. Do not use in extreme direct sunlight or on hot lacquer. Shake the bottle before use. Apply A1 Speed Wax sparsely on the dry lacquer, using common polishing wads. Let dry shortly and polish to high gloss with a terry or cotton cloth (do not use wad). Turn the cloth over frequently. We recommend you to repeat the application twice per year.

Tip: Care product residuals on plastic parts, like e.g. bumpers can be removed easily and completely with A1 Plastic Deep Cleaner.

Note: Store the bottle in a frost-protected place. Do not use on chrome-plated surfaces, like e.g. car emblems.
