

The Problem:

The chain and other moveable parts of mountain bikes, racing bikes etc. are often put under much stress. Then there are environmental influences such as rain and dirt that reduce the movement of moveable parts and accelerate wear and tear and corrosion.

The Solution:

Product Advantages:

Extremely smooth running of all moveable parts

- Suitable for all parts that get lubricated such as chain, cartridge, suspension fork, damper, bowden cables etc.
- Noticeably reduces friction and thus enables very smooth running of the chain and improved response properties of the spring elements
- Outstanding corrosion and wear and tear protection when cycling in the rain
- Significantly prolongs lifecycle of chain, suspension fork etc.
- Excellent penetrating properties
- Long-lasting adhesiveness even when exposed to much stress
- Very resistant to being washed off (in the rain)

Applications:

For all bicycle parts that require lubrication

How to apply:

Shake can before use. Apply a thin film of F100 chain oil to the inside of the clean and dry chain and allow to air for approx. 5 minutes. Then wipe off excess oil using a dry cloth.

Please note: Before use, clean chain with F100 chain cleaner. Do not use on brake discs and brake pads, tyres and saddles.
